

# PPA Solutions for UK Businesses

Reducing Your Energy Costs with Solar PPA Solutions

[www.sunrivalsolar.co.uk](http://www.sunrivalsolar.co.uk)

**SUNRIVALED**  
**SOLAR LTD.**

## OUR MISSION

**Help UK businesses lower energy bills and improve energy independence by installing solar panels at no upfront cost through zero-capex power purchase agreements, supplying affordable on-site electricity for the long term.**

# The Problem

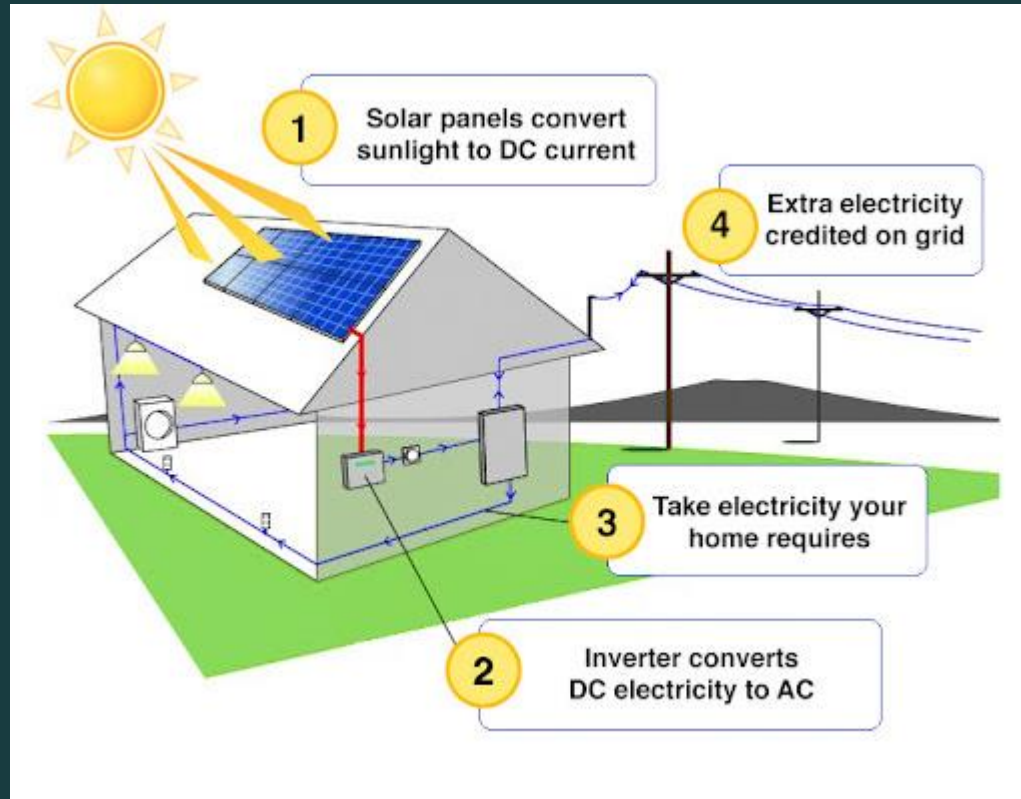

- UK businesses face high electricity costs. Many struggle with evening demand when machinery, processing equipment, heating and lighting are all running at once.
- Solar generation is strongest during the day, but without a direct supply agreement businesses still pay the full grid price whenever they draw power.
- Zero-capex solar PPAs let businesses lock in a cheaper daytime tariff with no upfront investment.
- Example benchmark: under the Ofgem price cap for 1 Oct to 31 Dec 2025, the electricity unit rate is 26.35 pence per kWh with a daily standing charge of 53.68 pence.

## Our Solution: Solar PPAs

- Zero-capex solar PPAs supply clean electricity to businesses at a fixed long-term tariff with no upfront cost.
- The solar system is installed, owned and maintained by our partner PPA Fund.
  - The business simply pays for the energy generated each month by the solar system, at a lower price than grid rates.
- Power is generated on-site during the day when demand is often high for milking, irrigation, refrigeration and processing. This reduces grid dependence and cuts exposure to volatile unit prices.
- Typical PPA rates sit below standard business tariffs, giving businesses predictable long-term savings.
- Rather than investing capital in solar infrastructure, businesses access cheaper electricity immediately and keep more predictable operating costs year after year.

# Savings With our Solar PPAs

Businesses pay some of the highest daytime electricity rates in the UK. Grid prices often land around 26–35 p/kWh, which hits hardest during peak demand.

With a zero-capex solar PPA, part of that demand is supplied by your own rooftop power. You pay for the solar you use at a pre-agreed tariff, well below the grid rate – no equipment to buy, no loan, no upfront spend.

## **Simple comparison (illustrative):**

Grid price: around 26.35 p/kWh

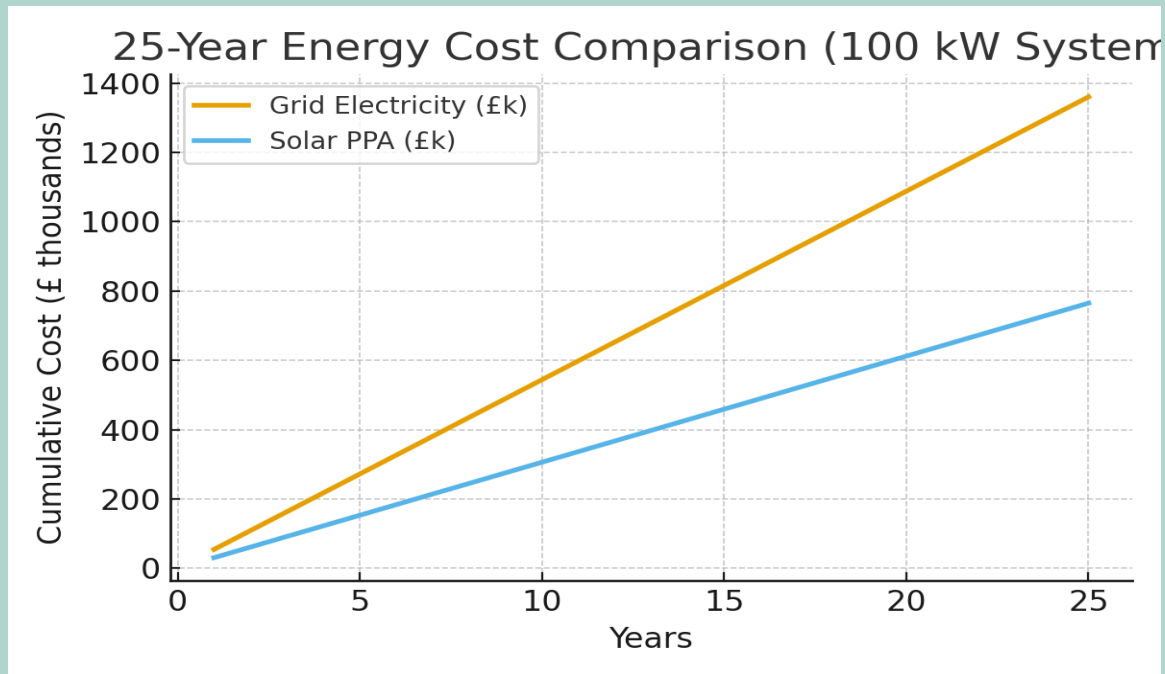

Solar PPA: typically 15–20 p/kWh

When daytime load is covered by solar instead of grid import, energy spend can fall by 25–40%, depending on roof area, system size and operational demand.

## **Bottom line:**

Your business generates cheaper electricity from your own roof, pays nothing for installation and secures predictable pricing for the next 15–25 years – meaning lower bills, lower risk and more control over operating costs.

# Savings With our Solar PPAs

# Why this is a smart investment for your business

- Lower energy bills by generating clean electricity on site at a predictable long-term price.
- No capital expenditure required.
- Protect your business from volatile energy markets with a long-term power purchase agreement that secures cost certainty for fifteen to twenty five years.
- Strengthen your sustainability performance and support net-zero goals through reduced carbon emissions.
- Unlock new value from unused roof or land space without interrupting day-to-day operations.
- Free site assessment includes a detailed financial model and clear visual designs for your proposed system.
- Low maintenance, reliable output and long-term price stability make on-site solar a smart operational and financial decision.
- Gain full ownership of the system at the end of the agreement, increasing your energy independence.

# Our PPA Partner's Credentials

- Large scale UK solar delivery across farms, commercial sites and industrial facilities
- Zero-capex PPAs deployed with long term performance guarantees
- Proven cost savings for high daytime consumption users
- Expertise in planning, grid connection and structural assessments
- Strong relationships with Tier-1 panel suppliers, EPCs and accredited installers
- Supported by established financial backers, insurers and asset managers
- Active portfolio running reliably with ongoing monitoring and maintenance

In short, you are working with a team that already delivers solar at scale, backed by credible partners in engineering, finance and long term asset management.

## Too good to be true?

- You are not buying panels, you are buying cheaper power.
- We fund, install and own the system, then sell you solar electricity below grid rates.
- Your savings and our return rely on the same thing, replacing expensive grid power with cheaper on site generation.
- No finance, no loans, no equipment to buy, no hidden costs.
- You keep your existing supplier for night use and top-up, and only pay for units actually delivered.
- We model your farm first, show projected savings over 15-25 years, and give a clear proposal to review.
- Upon project completion, you have access to a real-time dashboard of your system, showing real time figures of generation and system efficiency.
